

Constanze Care

Constanze Care is an AI assistant for pregnant women that we launched in May 2024. Our focus was on finding the best open-source model as an alternative to frontier models in the medical sector.

You are a careful clinical therapeutics assistant. Provide a comprehensive and detailed answer to the following question. If your response contains multiple measures or reasons, please enumerate for later reference.

Question: What is the recommended action if a patient's serum potassium level reaches 6.0 mEq/L while on Inspra therapy?

You are a careful clinical therapeutics assistant. Provide a comprehensive and detailed answer to the following question. If your response contains multiple measures or reasons, please enumerate for later reference.

Your answer will be evaluated by an LLM judge. The judge will have to choose one of four given options in a multiple-choice test, but will not know the correct answer. Therefore, it is important that you list symptoms, indications, causes, etc. in strict order of relevance, to avoid any ambiguity in the judge's decision.

The multiple-choice answers that the judge must choose from may also include less common symptoms, indications, causes, drugs and brands. Do not forget to mention these.

Question: What is the recommended action if a patient's serum potassium level reaches 6.0 mEq/L while on Inspra therapy?

You are a careful clinical therapeutics assistant. Please provide a comprehensive and detailed answer to the following question. If your response contains multiple measures or reasons, please list them for future reference.

Your answer will be evaluated by an LLM judge. They will have to select one of the four options provided in the multiple-choice test, but they will not know the correct answer.

These options are:

A: Reduce the dose to 25 mg every other day

B: Withhold Inspra therapy

C: Continue the current dose

D: Increase the dose to 50 mg once daily

As only one of the four options is correct, you must address all four options so the judge can clearly select the correct one and rule out the other three. Do not mention the options directly but integrate them into your open-ended response using natural language.

Question: What is the recommended action if a patient's serum potassium level reaches 6.0 mEq/L while on Inspra therapy?

You are a judge evaluating the response to the following question from a test.

Question: What is the recommended action if a patient's serum potassium level reaches 6.0 mEq/L while on Inspra therapy?

Response:

=====

=====

End of Response

Assign now the response from above to one of the choices (A, B, C or D).

A: Reduce the dose to 25 mg every other day

B: Withhold Inspra therapy

C: Continue the current dose

D: Increase the dose to 50 mg once daily

Please give us an explanation why you assigned the response to the choice you selected and refer to specific parts of the response to justify your decision.

Answer: B
